

Assumptions – Read This First

1. **Which script/year this guide is based on.** Several versions of the Title II process were provided, written in different years. This guide is based on the **most recent version (title_ii_2025.R)**, which prepared the report for the reporting year running **Fall 2024 through Summer 2025** (completers between 9/1/2024 and 8/31/2025). **To do the report “this year,” follow the same steps but substitute the current reporting year’s terms and files everywhere a specific term, year, or file name is mentioned.** This assumption affects every step, but only the dates/file names change – the logic stays the same.
 2. **All recoding is applied to one working file.** Around Steps 15–19 below, the original script juggled two slightly different working copies of the data (an artifact of how the previous analyst ran the code interactively): the “enrollment status” coding in Step 17 was technically applied to a different copy than the other codings. I assumed the *intent* was that **all of the data-element codings (Steps 15 through 21) are applied to the same single working file** (the manually reviewed cohort file from Step 14). If that assumption is wrong, Step 17 is the step affected – but applying everything to one file is almost certainly correct, and is the only practical way to do it by hand.
 3. **Meaning of the enrollment-history codes.** Steps 18–19 count semesters using a code the student records call “higher education history.” Based on how the script uses these codes, I assumed: **1 or 2 = new (first-time) undergraduate, 4 = continuing undergraduate, 6 = new graduate student, 7 = continuing graduate student.** If these code meanings are different at your institution, the counting rule in Step 19 would need to be adjusted. Please confirm the code definitions with the Registrar’s office or whoever maintains the enrollment files.
-

Title II Report

Date Created: 07-19-2026

Time Created: 11:44:56 PM

R script used to create this documentation:

- title_ii_2025.R

(Five other files were provided but not used; see “Files Provided But Not Used” at the very end of this document for the list and the reasons.)

Clarifying questions that could improve this guide (not required to follow it):

- Where does each source extract come from (which system or office produces the end-of-term, student program, completer, and historical enrollment files), and who should the new employee ask to get them?
- Does the federal Title II submission site accept a **blank** “date of program completion” for students who are still enrolled (non-completers)? The previous analyst planned to try submitting with it blank (see Step 26) but the outcome is not recorded in the script.
- Was an “anticipated completion date” for currently enrolled students ever obtained? A comment in the script says a request for this data was submitted on 1/28 but the result is unknown (see Step 26).
- Can the Registrar confirm the meaning of degree status codes “UA” and “GA”? The script treats them as the codes identifying degrees that were actually awarded (see Step 11).

What This Report Is

Title II is an annual **federal government report on teacher preparation programs**. The process documented here builds the student-level **Title II data collection worksheet**: one row for every student who was **enrolled in, or completed, an initial teacher certification program** during the reporting year, with the specific data elements the federal collection requires (identifying information, program codes, CIP codes, degree levels, years to degree, enrollment status, demographics, and program dates).

This guide is written so it can be followed in **any tool** (Excel, a database, a statistics package, or by hand). Wherever it says to “match” or “merge” files by student ID, that simply means bringing columns from one file into another by looking up each student’s ID (a lookup in a spreadsheet, or a join in a database).

A few terms used throughout:

- **Term codes** – terms are written as year + a 2-digit code: **90 = Fall, 10 = Winter, 20 = Spring, 60 = Summer** (e.g., 202490 = Fall 2024, 202520 = Spring 2025).
- **TED** – shorthand for **teacher education** majors/programs (the list of TED major codes is in Appendix A).
- **Initial certification program** – a program that leads to a *first* teaching certificate. Only these programs are reported (list of program codes in Appendix B).
- **Completer** – a student who finished (graduated from) a teacher education program during the reporting year (9/1 through 8/31).
- **CIP code** – the federal Classification of Instructional Programs code, a standard numbering system for academic programs.
- **IPEDS race/ethnicity** – the standardized federal race/ethnicity categories already present in the enrollment files.

Data and Inputs Used

All inputs are student-level files from the institution’s official data extracts. The exact file names used for the 2024–25 reporting year are shown for reference; pull the equivalent files for the current year.

1. **Official end-of-term enrollment files, one per term of the reporting year** (contain ID, SSN, name, date of birth, gender, IPEDS race/ethnicity, course level, total credits, higher-education-history code, and primary award level):
 - Fall (202490): eot_202490_20250305_final_w_race.csv
 - Winter (202510): eot_202510_20250507_final_w_race.csv
 - Spring (202520): eot_202520_20260126_final_w_race.csv
 - Summer (202560): eot_202560_20260126_final.csv
2. **Student program files, one per term** (contain ID, admit term, catalog term, school/college, department, degree, major, program, and any second school/department/major):
 - Fall: student_202490_20250306.csv
 - Winter: student_202510_20250306.csv
 - Spring: student_eot_20250606.csv
 - Summer: student_list_202560_20250730.csv
3. **Degree completer listing covering the reporting year (degrees dated 9/1 through 8/31)**: Degree Completer Listing_20260127_082131.csv
4. **Historical official fall and spring end-of-semester enrollment files going back about six years** (used only to count how many semesters each student has been enrolled). For 2024–25 these were the 12 files for Fall 2018 through Spring 2024:
 - Fall 2018: siris_ess_201890_official.csv
 - Spring 2019: siris_ess_201920_0327_OFFICIAL.csv
 - Fall 2019: siris_ess_fall2019_official.csv

- Spring 2020: `siris_ess_sprg2020_official.csv`
 - Fall 2020: `siris_fall2020_ess_official.csv`
 - Spring 2021: `siris_sprg2021_ess_official.csv`
 - Fall 2021: `Fall2021ess_official.csv`
 - Spring 2022: `siris-sds-ess-202220-0401_official.csv`
 - Fall 2022: `SIRIS-SDS-202290ESS_official.csv`
 - Spring 2023: `siris-ess-202320-official.csv`
 - Fall 2023: `SIRIS-SDS-202390ESS_1101official.csv`
 - Spring 2024: `SIRIS202420ess_0401Official.csv`
5. **Reference code lists** (maintained in the script; reproduced in the appendices of this guide): TED major codes (Appendix A), initial certification program codes (Appendix B), and the program crosswalk to Title II codes, CIP codes, degree levels, and program codes (Appendix C).
 6. **Manually reviewed intermediate files** created partway through the process and then used to continue (see Steps 14, 20, 22, and 24).

Part A – Build the Cohort of Teacher Education Students for the Year

1. Gather the four end-of-term enrollment files and four student program files

Collect one official end-of-term enrollment file and one student program file for each term of the reporting year (fall, winter, spring, summer). See the “Data and Inputs Used” list above.

2. Add a full-time/part-time status to each term’s enrollment file

Each term’s enrollment file needs a column marking each student FT (full-time) or PT (part-time), based on course level and total credits that term:

- Undergraduate (course level “UG”): 12 or more credits = FT; fewer than 12 = PT.
- Graduate (course level “GR”): 9 or more credits = FT; fewer than 9 = PT.

3. Standardize the columns and keep only what is needed

The source files name their columns slightly differently from term to term, so make the names consistent before combining anything. Make sure every file uses the same student ID column. Then keep only:

- From each **enrollment file**: ID, SSN, first name, middle initial, last name, date of birth, gender, IPEDS race/ethnicity, course level, the FT/PT column from Step 2, the higher-education-history code, and primary award level.
- From each **student program file**: ID, admit term, catalog term, school, department, degree, major, program, and (if present) second school, second department, and second major.

4. Attach program details to each term’s enrollment file

For each term, bring the student program file’s columns (admit term, catalog term, school, department, degree, major(s), program) into that term’s enrollment file by matching on student ID. You should end up with four term files, each combining enrollment and program information.

5. Clean the major codes

In every term file, remove a trailing letter “W” from any major code that has one (e.g., “ECIW” becomes “ECI”) so the codes will match the master lists used in the next steps. Do the same later for the majors on the completer list (Step 11).

6. Flag teacher education (TED) majors in each term

In each term file, add a column labeling the student’s **first major** as “TED” if the major code is on the TED list in **Appendix A**, otherwise “NOT”. Add a second column doing the same for the **second major** (blank/missing majors count as “NOT”).

7. Combine the four terms into one file – one row per student

- First, label every term-specific column with its term (e.g., major_2490, major_2520, ft_pt_2560) so you can tell the terms apart after combining. The identifying columns (ID, SSN, name, date of birth, gender, IPEDS race) do not get term labels.
- Combine the four term files by student ID, **keeping every student who appears in any of the four terms** (not just students present in all terms). Each student should end up as a single row with one set of identifying columns plus term-labeled columns for each term they attended.
- Where the identifying information (name, SSN, date of birth, gender, race) appears in more than one term, keep the first non-blank value.
- Remove any fully duplicated rows.
- Formatting: keep SSN stored as **text** (so leading zeros are not lost) and format date of birth as **mm/dd/yy**.

- **Checkpoint:** the script saved this as `step_1_eot_csf_all_terms_all_students_labeled_ted.xlsx`. Saving a copy at each checkpoint is strongly recommended – it preserves an audit trail and gives you a restart point.

8. Keep only students who were ever in a TED major

Keep only rows where at least one of the TED flags (first or second major, any term) says “TED”. Delete any rows that are completely blank. **Checkpoint:** `step_2_ted_only.xlsx`.

9. Flag course-level changes

Add a column checking whether a student’s course level (UG/GR) changed during the year. If the level is the same in every term attended, mark “no course lvl change”; otherwise record the first term in which the level differs. This flag is used during manual review (a level change can affect which rules apply to the student).

Checkpoint: `step_3_flag_for_course_level_changes_added.xlsx`.

10. Flag whether each student ended the year in a TED major

Add a column marking “yes” if the student’s major was TED in the **last term they were enrolled** (check summer first; if not enrolled in summer, check spring; then winter; then fall). Mark “check” if the student was TED at some point during the year but *not* in their last enrolled term (these get looked at by hand later). Mark “NOT” otherwise. **Checkpoint:** `step_4_flag_for_last_semester_TED.xlsx`.

11. Add the completers (graduates)

- Open the degree completer listing covering the reporting year (degrees dated **9/1 through 8/31** – per a comment in the script).
- Keep only: ID, graduation date, program, degree code, school/college, first major, and degree status code.
- Remove the trailing “W” from major codes (as in Step 5).
- Keep only rows where the degree status code is “UA” or “GA” – per the script, these identify degrees that were actually awarded (students who truly graduated).
- Keep only completers whose major is on the TED list (Appendix A).
- Merge this completer information into the cohort file by student ID, **keeping everyone from both files** – completers who do not appear in the year’s enrollment files must still be **added as new rows**, because graduates count even if they were not enrolled during the year.
- Add a column GRAD_STATUS: “GRADUATED” if the student has a graduation date, “NOT” otherwise.
- **Checkpoint:** `step_5_add_completer_info.xlsx`.

12. Flag initial certification programs

Title II only reports programs leading to *initial* certification. Add a column marking “yes” if the student’s program code is on the initial certification list in **Appendix B**, checking in this order: the program in their most recent enrolled term (summer, then spring, then winter, then fall), and also their graduation program (for completers). Everyone else is “NOT”. **Checkpoint:** `step_6_add_flag_for_initial_certs.xlsx`.

13. Filter down to the final Title II cohort

- Keep only rows where the initial-certification flag from Step 12 is “yes”.
- Then remove students who were enrolled **only in the fall** (not spring or summer – the script does not consider winter in this check) **and** did not complete a degree. They left before the end of the year and are not reported.
- **Checkpoint:** `step_7_title_ii_cohort_filter.xlsx`.

14. Manual review of the cohort (done outside the script)

Per comments in the script, the previous analyst paused here and reviewed the Step 13 file by hand:

- Confirmed no one was left who neither finished the year in a TED major nor graduated with a TED degree.
- Double-checked for duplicate students.
- Checked double majors – this review **found 2 students who were added to the cohort** because their second major qualified.

The reviewed file was saved as `step_7_title_ii_cohort_filter_20260127.csv`, and everything from Step 15 onward works from that reviewed file. Comparing `step_7_title_ii_cohort_filter.xlsx` (before) with `step_7_title_ii_cohort_filter_20260127.csv` (after) will show exactly what was changed by hand.

Part B – Create the Title II Data Elements

Work through Steps 15–17 on the reviewed cohort file from Step 14, adding one new column at a time. (Within Part B the order of the individual codings does not matter – each one only uses the source columns – but finish all of Part B before moving on.)

15. Identification and basic reporting fields

- **SSN (last 5):** create a column containing only the last 5 digits of the SSN. *Practical tip from the script:* the previous analyst put a letter “X” in front of these 5 digits while working (e.g., X01234) so spreadsheet programs would not strip leading zeros; the X is removed at the very end (Step 26).
- **Program type:** “T” for every student (all programs here are “traditional” programs).
- **Reporting group:** “3” for completers (GRAD_STATUS = GRADUATED); “2” for other enrolled students.
- **Reporting program:** the single program to report for each student – for completers, the program they graduated from; for everyone else, their program in the most recent enrolled term (summer if present, otherwise spring).
- **Course level:** “UG” if the reporting program code starts with “B” (bachelor’s-level), “GR” if it starts with “M” (master’s-level), otherwise mark “CHECK” and resolve by hand.
- **Checkpoint:** `step_8_check_program_course_level.xlsx`.

16. Program codes, CIP codes, and degree levels

Using the crosswalk in **Appendix C**, look up each student’s program (the graduation program for completers; otherwise the reporting program from Step 15) and fill in:

- **Code 1** and, where the program has one, **Code 2** (the Title II program identifiers);
- **CIP code 1** and, where applicable, **CIP code 2**;
- **Degree 1** and, where applicable, **Degree 2** (“B” = bachelor’s, “M” = master’s);
- **Program code** (the 5-digit code in the last column of Appendix C).

Leave the “2” columns blank for programs that only map to one code. **Checkpoint:** `step_9_check_cip_section.xlsx` (the program-code column was saved with the Step 17 checkpoint).

17. Enrollment status, program level, and demographics

- **Enrollment status** (based on the FT/PT flags): fall FT **and** spring FT = “1”; fall PT **and** spring PT = “2”; one term FT and the other PT (either order) = “3”; enrolled only in fall or only in spring: FT = “1”, PT = “2”; enrolled in neither fall nor spring but enrolled in summer = “2”. *Open question noted in the script:* for completers who were not enrolled at all during the year, leave enrollment status blank if the federal upload accepts it; if the upload rejects blanks, code them as full-time (“1”).
- **Program level:** “1” if Degree 1 is “B”; “2” if Degree 1 is “M”.
- **Gender:** “1” for M, “2” for F.
- **Ethnicity:** “1” if IPEDS category is Hispanic; “2” for any non-Hispanic race category (Black or African American, Asian, American Indian or Alaskan Native, Native Hawaiian or other Pacific Islander, White, Two or more races); “3” if unknown/not reported.
- **Race:** “1” Black or African American; “2” Asian; “3” American Indian or Alaskan Native; “4” Native Hawaiian or other Pacific Islander; “5” White; “6” Two or more races; leave **blank** for Hispanic students and for unknown/not reported.
- **Checkpoint:** `step_10_crosswalking_title_ii_data_elements.xlsx`.

Part C – Semesters Enrolled and Years to Degree

18. Attach up to six years of enrollment history

- Gather the official **fall and spring** end-of-semester files going back about six years (see input list item 4). Summer and winter terms are **not** used for this count.
- In each historical file, standardize the ID column and keep only the ID and the **higher-education-history code** for that term.
- Label each history column with its term, then bring all of them into the cohort file by matching on student ID. Arrange the history columns in chronological order, ending with the current year’s fall and spring history codes (already in the file from Part A).

19. Count semesters enrolled

For each student, count fall/spring semesters from when they first started at their current level:

- **Undergraduates:** find the term where the history code is **1 or 2** (their first term as a new undergraduate), then count every later term with code **4** (continuing), and **add 1** for the starting term itself.
- **Graduate students:** same idea using code **6** as the start and counting later **7s**, plus 1.
- If the starting code (1/2 or 6) appears **more than once**, mark the student “**check**” and resolve by hand.
- If the starting code **never** appears in the six-year window, mark “**check admit term**” – the student started before the window and the count must be figured out by hand from their admit term.
- **Checkpoint:** `step_11_check_semesters_enrolled_count.xlsx`.

20. Manual review of the semester counts (done outside the script)

Per comments in the script, the previous analyst reviewed the counts by hand at this point:

- Verified the counts calculated correctly; filled in or corrected odd cases and added notes.
- Added an “X” in front of any codes with leading zeros (same leading-zero trick as Step 15).
- Backfilled information for completers who were not enrolled during the year, where relevant.
- If a student’s admit term is the **most recent summer** (202560 for the 2024–25 report), counted them as **1 semester enrolled** (comments note this matches how it was handled the prior year).

The reviewed file was saved as `step_11_check_semesters_enrolled_count_20260127.csv`, and the next step works from it.

21. Convert semesters to years to degree

Add a “years to degree” column: 1–2 semesters = 1 year; 3–4 = 2; 5–6 = 3; 7–8 = 4; 9–10 = 5; 11–12 = 6. Anything outside 1–12 (including the “check” cases) is entered manually. **Checkpoint:** `step_12_check_years_to_degree_conversion.xlsx`.

Part D – Assemble the Final Worksheet

22. Manual work occurred here (contents unclear)

The script resumes from a file called `title_ii_workfile_w_notes.csv`, which is not created by the script – so some manual work (apparently adding notes/cleanup) happened between the Step 21 file and this one. The script’s comments do **not** say exactly what was done. If you need to know, compare `step_12_check_years_to_degree_conversion.xlsx` (before) with `title_ii_workfile_w_notes.csv` (after).

23. Arrange the columns to match the Title II data collection worksheet

- Add empty placeholder columns for a 3rd and 4th program code, CIP code, and degree level (the template has slots for up to four programs; this institution uses at most two, but the blank columns keep everything lined up).

- Add a **program start date** column (filled with the student’s admit term for now – converted to a real date in Step 25) and a **date of program completion** column (the graduation date; blank for non-completers).
- Put the columns in this exact order (student ID first, kept for reference only): ID; SSN (last 5); last name; first name; middle initial; date of birth; program type; reporting group; code 1; CIP code 1; degree 1; code 2; CIP code 2; degree 2; code 3; CIP code 3; degree 3; code 4; CIP code 4; degree 4; years to degree; enrollment status; program level; gender; ethnicity; race; program start date; date of program completion; program code.
- **Checkpoint:** `title_ii_draft_20260128.xlsx`.

24. Another round of manual review occurred here (contents unclear)

The script next picks up from `title_ii_draft_20260202.csv` – a file dated several days after the Step 23 draft – so additional hand edits were made in between. The comments do not say what changed. Compare `title_ii_draft_20260128.xlsx` (before) with `title_ii_draft_20260202.csv` (after) if needed.

25. Convert admit term to a program start date

Turn each student’s admit term into an actual date, using the first four digits as the year and the term code for the month/day (mapping provided “per Stuart” in the script’s comments):

- Fall (term code 90) = 9/1 of that year
- Winter (term code 10) = 1/1 of that year
- Spring (term code 20) = 2/1 of that year
- Summer (term code 60) = 6/1 of that year

Format as mm/dd/yyyy, e.g., admit term 202190 becomes 09/01/2021. **Checkpoint:** `title_ii_draft_20260202.xlsx`.

26. Final cleanup before submission (from the script’s closing comments)

- Make sure the program type “T” has not been auto-converted to TRUE by your software anywhere; change it back to “T” if it has.
- Remove the leading “X” from the SSN-last-5 column and from the one program code that has it – the X was only there to stop leading zeros from being dropped. Do this as the **very last thing** before submitting, and confirm the leading zeros survived.
- **Open item from last cycle:** an “anticipated completion date” may be needed for still-enrolled students. A comment notes that a request for this data was submitted on 1/28 (“Stuart submitted ticket to Ray”) and the plan was to try uploading with it blank for non-completers. Check with the office on the outcome before submitting this year.

The resulting file is the Title II data collection worksheet, ready for the federal submission process.

Appendix A – TED (Teacher Education) Major Codes

A major counts as teacher education if its code (after removing any trailing “W”) is one of the following 31 codes:

ABI, ACH, ACM, AEM, APH, APM, AES, AEN, AFR, AFS, ASP, SST, CHD, ECD, ECI, IEC, TDA, TSD, CSD, SHS, ESL, SLED, HEA, HEC, LTE, PEL, PEM, PHE, SBL, SDBL, SDL

Appendix B – Initial Certification Program Codes

A program counts as an initial certification program if its full program code is one of the following 55 codes:

BA_AEM, BA_AEN, BA_AFR, BA_AFS, BA_ASP, BA_ESL_CERT, BA_SST, BA_SST_ANT, BA_SST_ECO, BA_SST_GRY, BA_SST_HIS, BA_SST_POL, BA_SST_SOC, BSED_HEC, BSED_HEC_CHP, BSED_HEC_WEL, BSED_PEM, BSED_PEM_ADP, BSED_PEM_OAE, BS_ABI, BS_ACM, BS_AEM, BS_AES, BS_APH, BS_APM, BS_ECD, BS_ECD_ELA, BS_ECD_EST, BS_ECD_HUM, BS_ECD_MAT, BS_ECD_SOS, BS_ECD_UST, BS_ECI, BS_ECI_ELEI, BS_ECI_ESEI, BS_ECI_HMEI, BS_ECI_MTEI, BS_ECI_SSCH, BS_ECI_SSEI, BS_IEC, BS_IEC_ELA, BS_IEC_EST, BS_IEC_HUM, BS_IEC_MAT, BS_IEC_SOS, MAT_ABI, MAT_ACH, MAT_AEN, MAT_APH, MST_CHD, MST_HEA_NCRT, MST_PHE, MST_PHE_PENC, MS_CSD, MS_CSD_CERT

Appendix C – Program Crosswalk for Title II Data Elements

Look up the student's program (graduation program for completers; otherwise the reporting program from Step 15) and copy across the row. Blank "2" columns mean the program maps to only one code. Degree levels: B = bachelor's, M = master's.

Program	Code 1	CIP 1	Deg 1	Code 2	CIP 2	Deg 2	Prog. Code
BA_SST	5110	13.1318	B			B*	22930

**Note: for BA_SST, the script assigns a second degree level (“B”) to enrolled students only, even though BA_SST has no second code or CIP code. This looks like a leftover/typo in the script – verify whether BA_SST should really have a second degree level before using it.*

Files Provided But Not Used in This Documentation

The following five R scripts were provided along with `title_ii_2025.R` but were **not** used to build this guide. All of them are earlier versions of the same Title II process, and the most recent version takes priority:

- **`title_ii_2024.R`** – the previous year’s version of the same end-to-end process (it covers the Fall 2023–Summer 2024 reporting year). The 2025 script documented here is its direct replacement and follows the same overall logic, so the 2024 script was excluded as an outdated version. It can still be useful as a reference for how edge cases were handled in a prior year (for example, that year the completer list came in two separate files that were combined).
- **`Title II Script.R`** – a fragment of an older, mostly manual version of this report (the 2022–23 cycle). It only merges term enrollment files onto a cohort worksheet by student ID – work now covered by Steps 4 and 7 of the current process. Excluded as superseded.
- **`Title II Adding Completers.R`** – another fragment of the older 2022–23 process; it merges completer/enrollee columns onto a state matching worksheet by student ID – work now covered by Step 11. Excluded as superseded.
- **`Title II Script_Years_Enrolled.R`** – another fragment of the older 2022–23 process; it pulls the enrollment-history code from many past terms onto the worksheet to figure out years enrolled – work now covered by Steps 18–19. Excluded as superseded. (Its closing comment – that a handful of students had to be looked up by hand because they started before the files went back – is the same situation as the “check admit term” cases in Step 19.)
- **`Years_Enrolled_Add_ins.R`** – a companion to the previous fragment that did the same enrollment-history merging for a small set of added-in students. Excluded as superseded.
